Gary,

TDS and well yield results for the shallow wells in the southern impoundment clearly place this groundwater zone as class 2. Let me know if you have any questions.

Subject: San Jacinto Site - Shallow Alluvial Ground Water at the Southern Impoundment

Stephen,

As we discussed, I would appreciate TCEQ's assessment of the classification of the shallow ground water zone in the Southern Impoundment area of the San Jacinto River Waste Pits Superfund Site. FYI, the results of the ground water salinity and discharge capacity testing are included in the attached Draft RI Report Addendum, Section 2.3.2, p. 9.

Thanks,

Gary Miller
